## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by US 4,953,752 to Tousignant et al.

Tousignant shows a concrete distribution apparatus as seen in Fig. 5 having a suspended concrete bucket 21, a bottom slidable shutter 96 operable manually, see column 9, lines 32-33, and the shutter can slide on wheels, see Fig. 23.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over US 4,953,752 to Tousignant et al. in view of US 5,950,988 to Nardick.

Tousignant shows all claimed features as discussed above except for the shutter being biased in the closed position by a spring. Nardick shows a concrete valve as seen in Figs. 2 and 3, biased in the closed position by a spring 27. It would have been obvious to a person with ordinary skill in the art at the time the invention was made to modify the

shutter in the device of Tousignant to be biased in the closed position by a spring as taught by Nardick to resist an accidental dislodgement of the shutter until the actuation lever is actuated by an operator.

*Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fenelon shows a dry mixing apparatus. Lamort shows a draining valve. Erich shows a discharge closure. Reed shows valve apparatus. Munstermann shows a closure for pressure containers.
